About Me

Aspiring Software Engineer with experience in system programming and full-stack development. Skilled in building interactive applications through project-based learning at Solicode OFPPT and 42's software engineering program. **Seeking a PFE internship** to develop technical expertise and contribute to impactful projects.

Skills

- **Core skills** : Problem-Solving, Unit Testing, Debugging, Communication, Collaboration.
- **Frontend**: HTML, CSS, Javascript, Typescript, React, Zustand, Bootstrap
- **Backend**: Nodejs, ExpressJs, Postgresql, MongoDB, Redis, Php, Wordpress, C/C++
- **Technologies & tools**: Linux, Bash, Docker, Nginx, Jest, Git, Figma
- **Languages**: English, French, Arabic

Education

- **Software engineering program** 1337 - 42 network 2022 - Present
Trained in 42 School's peer-to-peer, project-based environment. Proficient in C/C++, algorithms, and system programming, with a focus on problem-solving, collaboration, and continuous learning.
- **Fullstack developer qualifying certificate** Ofppt solicode 2021 - 2022
Trained in fullstack development through a peer-to-peer bootcamp. Proficient in HTML, CSS, JS, PHP, MySQL, and React, with experience building dynamic, collaborative web applications.
- **Faculté des Sciences Économiques et Sociales** 2019 - 2021
Gained foundational knowledge in economics, social sciences, and accounting, fostering analytical and problem-solving skills.

Experience

- **Software Developer Intern** VidaTrans June 2022 - July 2022
 - Built a WordPress plugin with MVC and DDD architecture, utilizing domain repositories, service layers to streamline warehouse data management.
 - Enhanced security with input sanitization, query escaping, and robust data handling practices.
 - Enabled dynamic content display through custom shortcodes, improving user experience.

Projects

- **Paddle Wars** Docker, HTML, CSS, JavaScript, WebSockets, Web Components, JWT, Django, Redis
 - Collaborated in a team to create a modular multiplayer Pong game.
 - Developed frontend game logic, tournament features, and matchmaking interface.
 - Implemented an AI using a finite state machine and prediction algorithms.
 - Designed UI components using Web Components API for modularity.
- **Scribbly** Docker, React, Zustand, CSS, Nodejs, Express.js, MongoDB
 - Designed a note-taking app with features for authentication, organization, and management.
 - Containerized the application's front and back end using Docker.
 - Implemented advanced note filtering by pinned status, archive, and custom categories for enhanced user experience.
- **WeatherWear** Node.js, Express.js, PostgreSQL, Express_Session, JWT, Redis
 - Created a restful API recommending outfits based on weather conditions.
 - Built a secure authentication system using server-side sessions and JWT.
 - Optimized response times by caching weather data in Redis, reducing latency by 82%.
